

Programming Assignment #6: Online Shopping Cart Part I
--

1 Overview

More people are taking advantage of curbside pickup offered by grocery stores. For this assignment, write a C program that simulates an online shopping cart.

- Create 3 files for submission.
 - `ItemToPurchase.h`: This file should contain the structure definition and related function declarations/prototypes.
 - * Data members
 - `char itemName[]`
 - `itemPrice`
 - `int itemQuantity`
 - * Related Functions
 - `MakeItemBlank()`
 - Has a pointer to an `ItemToPurchase` parameter
 - Sets item's name to "none", item's price to 0, item's quantity to 0
 - `PrintItemCost()`
 - Has an `ItemToPurchase` parameter
 - `ItemToPurchase.c`: This file should contain the related function definitions.
 - `main.c`: This file should contain your `main()` function.
- Prompt the user to input two items and create two objects of the `itemToPurchase` struct. In between the two inputs use the following code which allows a user to input a new string, `c` that is declared as an integer.

```
c = getchar();
while(c != '\n' && c != EOF){
    c = getchar();
}
```

- Add the costs of the two items together.

- Your program should output the item, quantity, price per item and costs of that many items and the total costs as shown in the output.

2 Code Documentation

The very first lines in *all* of your programming project files this semester should be comments in the class header file (copy from header.c). Of course, the items in the square brackets [] in the comments should be filled in with the proper information.

In addition, the first output for all of your projects this semester, both for the lab exercises and the programming assignments, should be the name of the project and your name, e.g:

```
printf("Programming Assignment #6 - Joe Student\n");
```

Your code should meet all the stylistic requirements we have discussed in class including the appropriate use of whitespace and comments.

3 Sample Run

Your output should match the sample run below.

```
Programming Assignment #7: Online Shopping Cart -- Mark Schwitzerlett

Item 1
Enter the item name:
Chocolate Chips
Enter the item price:
3
Enter the item quantity:
1

Item 2
Enter the item name:
Bottled Water
Enter the item price:
1
Enter the item quantity:
10

TOTAL COST
Chocolate Chips 1 @ $3 = $3
Bottled Water 10 @ $1 = $10

Total: $13

...Program finished with exit code 0
Press ENTER to exit console.[]
```

4 Deliverables

For this assignment, you must turn in a zip file containing `ItemToPurchase.h`, `ItemToPurchase.c` and `main.c`. Use the built-in zip program in Windows to combine all three files into a single .zip file. Turn in your assignment by attaching the zip file to the assignment submission page. All labs and projects this semester will be submitted in Gradescope (via a Canvas assignment).

Due date: The assignment is due by 11:59 pm tuesday, December 2.
