

Lab Exercise #1: Simple Menu

0 Lab Instructions From Syllabus

1. **Attendance is mandatory.** Attendance will be recorded using TopHat in Lab as well.
2. Outside of situations not under your control, lab assignments must be completed during the **lab session**.
 - If you arrive at the lab on time and cannot complete the assignment by the time the lab finishes, then the lab instructor may give you permission to submit the assignment within 24 hours of the end of the lab.
 - This extension is not guaranteed – you must receive permission from the lab instructor, and it will never be for more than 24 hours.
3. Your work must be “graded” by the lab instructor or TA. The instructor will notify you each lab as to what they expect from you during that session.
4. You will work in pairs during lab sessions. Partners will be assigned and will probably change during the semester. You and your partner will both receive the same grade for the lab session (assuming you both attend the lab and turn in the same code for the lab). Note that working in pairs DOES NOT apply to the class programming assignments.
5. You may leave early from a lab if you have completed the work to the satisfaction of the lab instructor. Generally this will mean you have completed that day’s work plus had it checked out or graded by the instructor.
6. You should only work on lab assignments while attending lab sessions.
7. You may not switch lab sessions without prior permission from both lab and course instructor.
8. You may bring and use your own laptop computer.

1 Overview

Write a C program to print a simple menu to the screen and request the user to make a selection. You should use `scanf` to read the user’s selection and print it to the screen.

2 Code Documentation

The very first lines in *all* of your programming project files this semester should be comments in the class header file (copy from header.c). Of course, the items in the square brackets [] in the comments should be filled in with the proper information.

In addition, the first output for all of your projects this semester, both for the lab exercises and the programming assignments, should be the name of the project and your name, e.g:

```
printf("Lab #1 - Joe Student\n");
```

Obviously, for the lab exercises, the output should include the names of both students in the lab group, e.g:

```
printf("Lab #1 - Joe Student and Jane Doe\n");
```

3 Sample Run

Your output should match the sample run below.

```
Lab #1 Simple Menu
Mark Schwitzerlett and Jacobi
February 2, 2026

Select An Option:
A:      Add
B:      Edit Name
C:      Edit Quantity
D:      Delte
Q:      Quit

Enter your selection: C

You selection option C

...Program finished with exit code 0
Press ENTER to exit console.
```

4 Deliverables

You should turn in a stand-alone, complete application program (your C source code, a single “.c” file) containing a main() function. All labs and projects this semester will be submitted in Gradescope (via a

Canvas assignment).

Due date: The lab is due at the end of your lab period, either Monday, February 2nd or Tuesday, February 3rd
